

Thinking beyond.

Scouten Engineering is a dynamic consulting civil and structural engineering firm based in Prince George, British Columbia. We provide creative solutions to challenging situations.

An abstract graphic consisting of a network of white lines of varying thicknesses intersecting on a solid orange background. The lines form a complex, interconnected web of polygons, primarily triangles and quadrilaterals, creating a sense of structural engineering or architectural design. The pattern is denser in the lower right quadrant and fades towards the top left.

# THE SCOUTEN STORY

We have been successfully meeting the needs of our clients since 1995. Our people provide innovative solutions to challenging situations. Our solutions have helped us earn a reputation as the creative problem solvers company. We embrace value-engineering which identifies opportunities at every stage of project development to reduce cost without sacrificing functionality or long term performance.

We respond quickly to calls for urgent assistance. We are known for jumping in a truck or getting on a plane within hours. We are a team-oriented engineering and solutions firm where everyone lends their skills and expertise to develop the best outcome for each new challenge. Clients receive our collective-best effort every time they call. We know our region (Central and Northern BC, Yukon, Northwestern Alberta, Saskatchewan, Manitoba, Northwest Territories and Nunavut). We know our clients. We know what they need to succeed. They know that when they call Scouten they will receive superb service and innovative solutions.

Scouten is about value-added structural and civil engineering, project management, contract administration, construction services, and most of all, innovative solutions at a cost effective price. We work hard to earn the trust of our clients and we love it when they tell others about how pleased they are with our work. Feel like it's time to test the 'Thinking Beyond' approach at Scouten? We look forward to assisting you with your projects.

Our approach to all of our projects is simple – provide quality, efficiency and creativity, tailored perfectly for each client, every time.

We do this through thoughtful engineering, crafted by professionals, guided by quality and integrity, working in a fulfilling and engaging environment.

As of March 2020, founder, Dave Scouten sold Scouten Engineering to three long standing employees Ben Crimp, Craig Hadley and Kyle Nelson. Even though there are new faces to the company, you can still expect the same exceptional level of service and quality you've come to expect from Scouten Engineering.

## VISION STATEMENT

Quality, efficiency and creativity, tailored perfectly for each client, every time.

## MISSION STATEMENT

Thoughtful engineering, crafted by professionals, guided by quality and integrity, working in a fulfilling and engaging environment.

Design Technologist

Tintu Baby  
Design Technologist

Liezl Yaranon  
Administrative Assistant

Chille Ocbena  
Administrative Assistant

David Scouten  
Founder and Technical Advisor

# COMPANY EXPERIENCE

Scouten Engineering has been providing professional engineering and technical support services to our clients throughout British Columbia, Alberta, Yukon, Saskatchewan, Manitoba, Ontario, Northwest Territories, and Nunavut since 1995.

Our experience in the delivery of professional engineering and related technical services and our approach to all of our engineering service agreements can be summarized as follows:

## **We know what we are**

We're a relatively small firm (of less than 20 employees) committed to the delivery of exceptional engineering services. We don't pretend to be a company of 1000 employees, because we're not.

## **We know who we are**

We're a group of like-minded, enthusiastic and extremely well-trained individuals committed to living and working in northern BC. We raise our families here and have a vested interest in the economic development and diversification of northern BC.

## **We know what we can do**

We've taken on projects as small as can be imagined and other projects much larger than can be expected from a firm of our size. We have complete confidence in our abilities but know our limitations so we collaborate with larger engineering colleagues when required.

## **We know what our clients expect**

We've seen clients disappointed in the service they've received from other much larger, but geographically remote consultants and advisors. We know that our clients in north-central BC and northwestern Alberta expect and deserve timely and effective professional service.

## **We know who our clients are**

We've come to know our clients as more than billing numbers, or abstract names on revenue forecasts. We consistently treat our clients as human beings, also living and working in northern BC, with whom we can build meaningful, long-term professional relationships.

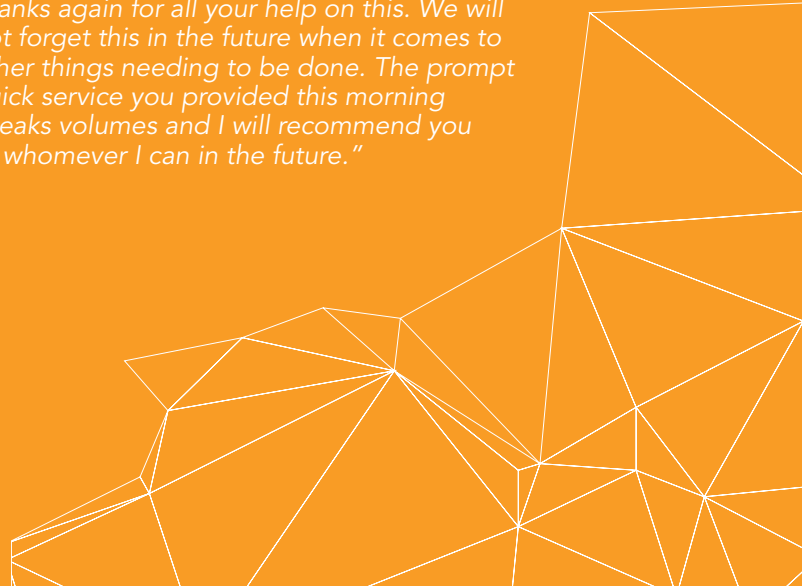

Our approach to all of our projects is simple - provide consistently excellent engineering advice and 'product' (including drawings, technical specifications and other documents) on time and on budget.

*"Scouten has always responded expeditiously and went beyond the call of duty, getting us out of a bind caused by others."*

*"They are extremely technically capable and have developed a very sound engineering team. If something is outside their area of expertise they have no hesitation in suggesting a third party to perform the work."*

*"Best looking condenser stand we have had the pleasure of putting a unit on... and it all fitted perfectly."*

*"Thanks again for all your help on this. We will not forget this in the future when it comes to other things needing to be done. The prompt quick service you provided this morning speaks volumes and I will recommend you to whomever I can in the future."*

# OUR SERVICES | STRUCTURAL ENGINEERING

Scouten Engineering is known in Northern BC as a service-driven, responsive, creative problem solver which has successfully designed complex structures and systems solutions for the mining, oil and gas, bioenergy, pulp and paper and other resource sectors.

Our designs include industrial buildings, process and bulk material storage enclosures, office facilities and commercial buildings. Scouten Engineering also designs water storage facilities, including cast in place concrete, structural steel and earthen reservoirs. Our designs include ancillary structures such as pump houses, valve chambers, mechanical rooms and pipe supports.

Structural Engineering services include:

- Design Of Industrial Structures
- Bridge Design and Construction Services
- Grade Separation Structures
- Cable Barrier Systems
- Structural Design Of Industrial and Commercial Buildings
- Advanced Composite Materials and Structural Repairs

# OUR SERVICES | CIVIL ENGINEERING

Scouten provides complete civil engineering design and drafting services for provincial and municipal governments, commercial developers and industrial clients.

Our design projects include site servicing, sewer, water, storm drainage, utilities, and mechanical interface piping connections. We also design resource roads for forestry, mining and energy clients. Scouten can also provide survey, layout and construction supervision as part of our one-stop, cost effective approach to customer service.

Civil Engineering services include:

- Municipal Utility Connections and Drainage Systems
- Subdivision Design
- Industrial and Commercial Site Development
- Highway and Road Design and Construction

## OUR SERVICES | OTHER SERVICES

Scouten is known by its clients for “Thinking Beyond” what is immediately required. Scouten staff develop the best solution for today’s requirements but also consider how the solution will serve its clients in the longer term. We provide professional, technical and project management services to clients in the resource extraction, bioenergy, transportation and commercial sectors. We back this up with

contract administration, and construction project services so that our clients don’t have to involve multiple companies to complete a project.

Services include:

- Planning and Technical Services
- Project Management and Costing
- Monitoring and Assessments
